About

I am a curious individual who enjoys challenges, learning and solving complex problems. My passion for technology dates back to the 1990s when I used the ol' dial-up modem for internet access. During that time, my curiosity led me to breaking numerous computers until I learned how to build one myself. I decided to pursue my I.T. career by enlisting in the Army which allowed me to earn certifications and develop technical skills but, most importantly team-work and problem-solving skills. During my military career, I was introduced to the world of software development which fascinated me. Following my time in the military, I started a successful business that requires minimal oversight in order to focus on software development. What I love most about software development is the required continuous learning, complexity of problems and being able to see things come to life.

CERTIFICATIONS/TRAINING

Certified Defense Financial Manager (CDFM)
Business Analytics (University of South Carolina)
CompTIA Network+ (Expired)

- Finance for Operations Managers (Project Management Institute)
- Army Reserve Officer Training Corps(ROTC)

EDUCATION

Full-Stack Software Developer
Nashville Software School

Masters of Science, Management
Austin Peay State University

Bachelor of Professional Studies
Austin Peay State University

EXPERIENCE

NASHVILLE SOFTWARE SCHOOL -

FULL STACK DEVELOPER

Full-time immersive C#/Net Bootcamp

2019- Current

- Learned software development team skills through various group projects that utilized Grunt for task automation and Github for project management.
- Hands-on application of OOP fundamentals through group and individual projects reflecting real-world business problems
- Assisted in designing applications through the use of entity relationship diagrams and planning Group Projects

GROUP PROJECTS

Nutshell

Nutshell involved working as a member of a development team in which the team was assigned tickets through our tracking system. I specifically focused on completing the API by determining the data needed and relationship for each assigned ticket. Additionally, I completed the event's ticket utilizing JavaScript which allowed users to create and edit events while automatically updating the upcoming event.

PROJECTS

Easy Communication Manager

Easy Communication Manager is an application designed as a communication platform for transportation businesses. The application simplifies the flow of communication between a dispatcher and a driver. The application is built with React.JS and utilizes JSON-server. The styling was done using Reactstrap.

Welcome To Nashville

This application is designed for new and current members of Nashville, TN. It gives the user the ability to search for upcoming events, places to dine and local recreations. I focused on providing the user with the ability to find local meetups in the community. I accomplished this task by utilizing the Eventbrite external API as well as JavaScript. I set the API fetch so the user can search by category and limited the results to the Greater Nashville area.
